

QUASAR

[kwey-zahr]

One of over a thousand known extragalactic objects, starlike in appearance and having spectra with characteristically large redshifts, that are thought to be the most distant and most luminous objects in the universe.

A class of extragalactic objects that emit an immense amount of energy in the form of light, infrared radiation, etc, from a compact source. They are extremely distant and their energy generation is thought to involve a supermassive black hole located in the centre of the galaxy

Father said;

He will transmit light into the hearts that are filled with darkness

He will shine confidence and trust in Me and become a beacon in this bleak world that is filled with doubt

He will attract those who others feel are not worth saving, but he will help save them because I am sending him

He will become a powerful advocate for the downtrodden and destitute

He will become and "faith" force to be reckoned with

He is one of the "Brother's of Power"
